Professional Work Experience

Myplay Company — *Python Full Stack Developer*

Nov 2021 – Jun 2024, Seoul, South Korea

Developed and scaled a social platform facilitating the organisation and participation in amateur football matches, handling over 600k users and 320k MAU.

- **Full Product Lifecycle:** Collaborated cross-functionally in agile sprints (bi-weekly releases), managing feature development from planning to deployment.
- **Backend Optimisation:**
 - Enhanced **Django REST Framework (DRF)** API performance by analysing querysets and reducing redundant database access.
 - Refactored ORM logic to minimise N+1 queries using `select_related`, `prefetch_related`, and advanced query annotations.
- **Architecture Refactor:**
 - Transitioned a monolithic Django + Template app to a decoupled architecture with a **Django REST API backend** and **Vue.js** frontend.
 - Further modernised the stack by migrating to **Next.js** (React-based SSR framework) for improved frontend performance and maintainability.
- **Key Features Built:**
 - **Payment System:** Integrated with third-party gateways using secure webhooks and tokenised transactions.
 - **User Registration:** Implemented JWT-based authentication and social login (OAuth2).
 - **Search Engine:** Built full-text and filtered search capabilities using **Elasticsearch** (via AWS OpenSearch).
 - **Review System:** Developed scalable user-generated content modules with spam filtering and moderation tools.
- **Infrastructure & Tools:**
 - Deployed services on **AWS EC2, S3**, and used **Redis** for caching and rate-limiting.
 - Employed **MySQL** for transactional data and **PostgreSQL** for geospatial queries using PostGIS.

Technologies: Python, Django, Django REST Framework, Vue.js, Next.js, TypeScript, Redis, MySQL, PostgreSQL, AWS (EC2, S3, OpenSearch), Git

Covision — *Full Stack Developer*

Jul 2017 – Oct 2021, Seoul, South Korea

Built and maintained enterprise collaboration platforms tailored for corporate clients, with deployments scaling to 12,000+ users.

- **Custom Collaboration Tools:**
 - Developed bespoke modules such as **Attendance Management**, **Project Tracking**, and **Enterprise Document Management System (EDMS)**.
 - Designed modular systems allowing reusable components across clients.
- **Integration & Migration:**
 - Built **OpenAPI-compliant** interfaces to integrate internal tools with third-party ERP, HR, and CRM systems.
 - Executed smooth data migrations using bulk scripts and ETL pipelines from legacy systems into **MSSQL/Oracle** databases.
- **Lead Developer Responsibilities:**
 - Spearheaded the DL Groupware project (12k users), overseeing the architecture and ensuring secure role-based access control (RBAC).
 - Coordinated backend/frontend development in **Java Spring** and **C# ASP.NET**, ensuring scalable deployment.
- **DevOps & CI/CD:**
 - Utilised on-premise servers for deployment; automated builds and testing through Jenkins and Git-based workflows.

Technologies: Java Spring, C# ASP.NET, Redis, MSSQL, Oracle, RESTful APIs, OpenAPI, Git

Education

Tech University of Korea (B.S, Telecommunication Engineering)

Siheung, South Korea

Skills

-
- **Advanced Proficiency in:** Python, Java, C#, MySQL, JavaScript, TypeScript, VueJS, AWS, Git
 - **Intermediate Proficiency in:** Redis, NextJS, AWS OpenSearch
 - **Language:** English (Advanced), Korean (Native)
